

RAHUL KUMAR

Java Backend Developer (Spring Boot) | 4.5+ Years Experience

Bangalore, India | +91 9002838410 | rahulstudy1711@gmail.com | [LinkedIn](#) | [GitHub](#) |

PROFESSIONAL SUMMARY

Java Spring Boot developer with 4.5 years of experience at Infosys, building and maintaining microservices and RESTful APIs for insurance-domain clients. Skilled across the full development lifecycle — design, coding, testing, code review, and production troubleshooting — within Agile teams. Recently completed a post-graduate diploma in Embedded Systems, adding hands-on knowledge of microcontrollers and hardware-software integration to a strong backend engineering foundation. Comfortable working close to the metal as well as at the API layer, with a track record of resolving issues quickly and delivering stable, well-documented releases.

TECHNICAL SKILLS

Languages & Core: Java, C, C++, Embedded C, DSA, Servlet

Frameworks & Architecture: Spring Boot, Microservices, MVC, RESTful API

Data & Platforms: SQL, MySQL, JDBC, JPA, Hibernate (ORM), Pivotal Cloud Foundry (PCF), UCD

Tools: Eclipse / IntelliJ, Postman, Maven, Jenkins, GitHub, JIRA, WinSCP, Checkmarx

Practices: Agile Methodologies (Scrum), SDLC, Code Review, Unit Testing, Vulnerability Remediation

Embedded Systems (add-on): 8051, ARM Cortex-M (LPC1768); UART, CAN, SPI, I2C; Keil µVision, Proteus, MATLAB

PROFESSIONAL EXPERIENCE

Senior Systems Engineer

Oct 2023 – Jan 2026

Infosys Ltd. | Project: FEP Claims Insurance

- Designed, developed, and tested high-quality code using Spring Boot and Java, working closely with clients on requirements and delivery.
- Analyzed, designed, and implemented RESTful services and APIs as part of the software development life cycle (SDLC), including feasibility analysis.
- Proposed feasibility solutions and ensured software quality through code reviews, testing, and performance debugging.
- Documented system configuration, mapping, and processes; identified and resolved software issues quickly.
- Maintained stability and integrity of sprint deliverables by following Agile methodologies.
- Identified and removed major application vulnerabilities using Checkmarx.

Systems Engineer

Jun 2021 – Sept 2023

Infosys Ltd. | Projects: RSC, FEP

- Built Java-based features across insurance domain projects and developed user interfaces for web applications.
- Compiled, processed, and analyzed test data and results to improve product quality.
- Managed key IT and compliance programs for proactive risk management using Conjur services.
- Configured, installed, and upgraded SQL databases.

SPRING BOOT— APPLIED PROJECTS

Smart Net-Meter Energy Billing System | Spring Boot, MVC, JPA, JDBC, Log4j, REST API

Built a back-end billing application to automate net-metering calculations for residential prosumers. The system tracks energy import/export data, computes net consumption, and generates itemized bills with credit adjustments for energy fed back into the grid. Implemented RESTful APIs with Spring MVC, persisted meter and transaction data using JPA/JDBC, and integrated Log4j for structured application logging.

EMBEDDED SYSTEMS — APPLIED PROJECTS

Energy Management of Grid-Tied Inverter Using SRTPV | ARM-Cortex-M, PWM, PLL, Matlab

Designed and implemented a Grid-Tied Inverter System using MATLAB for power electronics simulation and used an ARM Cortex-M3 (LPC1768) microcontroller to generate synchronized PWM signals and Phase-lock loop for AC grid coupling. Developed a lightweight REST API on the embedded side to transmit real-time energy import/export data to a Spring Boot-based billing system, enabling automated net-metering calculations.

EDUCATION

Post-Graduate Diploma, Embedded Systems Design & Development

Feb 2026 – Jul 2026

Indian Institute of Embedded Systems (IIES), Bangalore | ISO CERTIFIED (9001:2015)

B.Tech, Electrical Engineering

2016 – 2020

Meghnad Saha Institute of Technology (MAKAUT)
